GH1000–GHH1200: Forklift frame for excavators

Forklift frame for excavators

Engcon's pallet forks/forklift frames – A robust and cleverly engineered design for best visibility. Tempered forks guarantee a long service life.

NB! Always consult the applicable safety instructions for using the pallet fork on each individual machine. When using the pallet fork together with a tiltrotator, a check valve must be fitted to the tiltrotator.
While all new Generation 2 tiltrotators come with load bearing valves fitted to the tilt cylinders, they can be easily retrofitted to older models.

GH = mechanical spreading,
GHH = hydraulic spreading
